BRIAN KIM

Boston, MA • bsk945@gmail.com • linkedin.com/in/brian-kim-37112819a • briankim945.github.io

EDUCATION

Brown University | B.S. Computer Science; B.A. Philosophy Providence, RI | May 2023
Magna cum laude, Phi Beta Kappa | GPA: 3.93/4.00

EXPERIENCE

Thorogood Associates | *Data & AI Consultant* Boston, MA | June 2024 – Present

- Lead a distributed US–India team delivering monthly and quarterly executive reporting to a Fortune 500 multinational consumer healthcare company ($15B+ revenue, 22,000+ employees); assumed lead role mid-engagement as team scaled from 5 to 3 and delivered all 13 year-end OKRs on schedule through an active client-side merger
- Own end-to-end report development: pull data via SQL against Snowflake and from finance, marketing, and sustainability source systems; clean and transform inputs; build and maintain Power BI dashboards surfacing financial performance, innovation KPIs, marketing ROI, and sustainability metrics for C-suite review
- Serve as primary client contact, coordinating with department heads across finance and marketing to source and validate data, iterating on report design in response to evolving executive priorities—including elevating sustainability reporting after it emerged as the client's most consistently successful OKR
- Built an ML classification system mapping 200,000+ products across Nielsen and Circana market research taxonomies for a CPG client, predicting 22 category labels at 95%+ accuracy and reducing per-product labeling from several minutes of analyst time to milliseconds of model inference; deployed to run on a monthly cadence
- Maintain production data pipelines on Azure (Databricks, Data Factory, Data Lake) supporting a CPG analytics platform spanning 350+ tables and multiple third-party market data sources; adapt ingestion workflows to upstream vendor schema changes and respond to production incidents to keep downstream analytics on schedule

Delfino AI | *Engineering Consultant* San Francisco, CA | July 2023 – June 2024

- Developed a customer pilot automating insurance benefits verification calls for healthcare provider offices based on direct client requirements, redirecting staff time to higher-value tasks and increasing revenue by reducing claims denials through up-front verification; researched and selected APIs for HIPAA compliance
- Built an end-to-end call pipeline integrating Twilio Voice for automated outbound calls, Azure Speech-to-Text for transcription, and GPT-4 for conversation generation and call log analysis, producing human-readable results for client review

ThayerMahan | *Machine Learning Engineer* Groton, CT | May 2022 – August 2022

- Built a ship classification model for company-owned maritime audio data, replacing a manual workflow of ~15 minutes per sample; conducted exploratory analysis on AWS-hosted datasets that surfaced significant class imbalance (50%+ single-class), informing data splitting strategy
- Delivered a final model achieving 77% accuracy at 12 milliseconds per sample—roughly 1/75,000 the human time—and presented findings on data imbalance and ML-driven speedups to company management

ACADEMIC RESEARCH EXPERIENCE

Serre Lab, Brown University | *Researcher (Volunteer)* Remote | January 2025 – Present

- First author on a forthcoming paper evaluating long-range visual reasoning capabilities in transformer-based image classification models; abstract submitted to Cognitive Computational Neuroscience (CCN) 2026
- Co-author on a paper introducing spectral convolutional state space models for learning long-range spatial dependencies in computer vision; abstract submitted to Cognitive Computational Neuroscience (CCN) 2026

SKILLS

Languages & Frameworks: Python, SQL, C/C++, Java, R, JavaScript; PyTorch, JAX, Django, Node.js, React/React Native
Data & ML Libraries: NumPy, pandas, scikit-learn, Hugging Face
Data & Cloud: Azure (Databricks, Data Factory, Data Lake), Snowflake, Power BI, AWS
Tools: Git, Linux, Docker, Conda/venv
